

SORA WON

SOFTWARE DEVELOPER

0432 025 829 | sora.won91@gmail.com | Git: <https://sora-won.github.io/>

PROFILE SUMMARY

Full-stack Web Developer with 2+ years of professional experience in enterprise web development and system integration. Experienced in delivering secure, high-availability web platforms across financial, aviation, and public-sector environments. Proven ability to work effectively in cross-functional teams, bridging development, system, and network domains. Currently completing a Master of Information Technology at Griffith University, with strong strengths in problem-solving, technical planning, and documentation.

SKILLS

Programming: Java, C, C#, Python, PHP

Frameworks: Spring Framework, JSP, MyBatis, Laravel, Bootstrap

Frontend: JS, jQuery, AJAX, HTML5, CSS3

Databases: Oracle (OCP certified), MySQL, MSSQL

Tools & Others: Git, Firebase, Figma, JSON

EDUCATION

GRIFFITH UNIVERSITY 2024 - 2026

Master of Information Technology

GPA: 6.5 / 7.0

KOREA POLYTECHNIC UNIVERSITY 2010 - 2014

Bachelor of Computer Science

GPA: 4.05 / 4.5

WORK EXPERIENCE

Software Developer (Industry Placement) | SkyNet Aviation

Mar 2026 - May 2026

- Contributed to the development of a flexible aviation ruleset management system supporting fatigue compliance configuration for non-technical operators.
- Designed and implemented dynamic UI components using JavaScript, AJAX, Bootstrap, HTML5, and CSS3 to enable interactive rule configuration.
- Built and integrated backend validation logic in PHP, ensuring accurate enforcement of complex aviation compliance rules.
- Handled MSSQL database interactions and REST-style API integration for efficient data retrieval and JSON data processing.
- Collaborated with the team to deliver a solution that improved operator efficiency and reduced configuration errors in fatigue management workflows.

Tech Stack: PHP, JavaScript, AJAX, JSON, MSSQL, Bootstrap, HTML5/CSS3, REST-style APIs

Web Programmer / Full stack Developer | E4NET, South Korea

2014-2016

- Developed and maintained enterprise web platforms for major banks, financial institutions, and government agencies in South Korea.
- Built and enhanced online payment-related services using Java, Spring Framework, JSP, MyBatis, JavaScript, jQuery, AJAX, HTML, CSS, MySQL, and MSSQL.
- Integrated backend business logic and database workflows to support secure and reliable service operations.
- Maintained legacy systems by implementing functional improvements, resolving defects, and adapting programs to evolving client requirements.
- Collaborated with system operators, network specialists, and project teams to address deployment, hosting, security, and web service issues.
- Supported operational reliability through involvement in user access control, backup, business continuity, and disaster recovery-related planning.

Tech Stack: Java, Spring Framework, JSP, MyBatis, JavaScript, jQuery, AJAX, HTML5/CSS3, MySQL, MSSQL

HealthScan App

Unity based Smart Retail App

Developed a Unity-based mobile retail application integrating barcode scanning, OpenFoodFacts API, Firebase services, and product recommendation features

Challenge:

- Designed the frontend experience from UI/UX layout and screen flow to implementation, gaining end-to-end frontend development experience.
- Addressed Android and iOS compatibility challenges, including UI scaling, layout behaviour, and device-specific camera interactions.

Tech Stack: Unity (C#), Using Open API and handling JSON data, Firebase Authentication, Firebase Database

Java-based Tetris Game

Team Project – Single & Two-Player Modes

Developed a JavaFX Tetris game with MVC architecture, OOP design, single/two-player modes, and Git-based collaboration.

Challenge:

- Managed source code and version control using Git/GitHub, including branching, merging, and conflict resolution.
- Refactored the codebase to apply MVC architecture and improve maintainability, readability, and team collaboration.

Tech Stack: Java, JavaFX, Git (GitHub), MVC, OOP

Laravel-based Event Management Website

Designed and developed a Laravel-based event management website, covering overall website structure, user flow, frontend development, and backend implementation.

Challenge:

- Built responsive frontend pages using Blade, Bootstrap, HTML, CSS, JavaScript, and AJAX.
- Implemented Laravel MVC structure, CRUD functionality, database integration, and AJAX-based filtering/pagination.

Tech Stack: Laravel, PHP, MySQL, Blade, Bootstrap, AJAX

AI-enabled Anti-Tailgating Access Control System

System Design / Documentation / Team Collaboration / Security Planning

Challenge:

- Created UI prototypes and interaction flows using Figma to visualise the monitoring and access control process.
- Simulated access log data and applied Splunk dashboards to understand real-world security monitoring and incident analysis workflows.

Focus Areas: System Design, Cybersecurity Concepts, UI/UX Prototyping(Figma), Technical Documentation
